EXPERIENCE

Gödel Terminal — Software Engineer

May 2026–Present

- Built configurable financial data grids with sorting, filtering, row virtualization, and cell-level store subscriptions to live prices delivered through Kafka-backed WebSocket feeds.
- Introduced the terminal's first shared UI component library, standardizing nearly all terminal table and shared-chart rendering.
- Owned React Native mobile development across two two-week iterations, from chat to financial research and brokerage-integrated order entry; adapted desktop commands into guided mobile workflows. Released on Android, with iOS in private beta.
- Built Gödel Atlas and all terminal supply-chain visualization views, including Three.js 3D views, for exploring a dataset of 15,184 companies and 56,340 relationships.
- Established linting, formatting, type checking, and React Doctor CI checks; validated workflows with automated tests, coverage reporting, Playwright E2E testing, and internal beta testing.
- Worked with engineering leadership and the CEO on trading-product requirements, using direct customer feedback to prioritize features and usability improvements.

Tapestry — Software Development Engineer (Full Stack)

Jun 2022–May 2026

- Built React and TypeScript analytics interfaces for Collection Curator, combining configurable data tables, custom column types, filtering, and real-time collaboration through Legend State.
- Led frontend development of a presentation editor with React and Styled Components, including drag-and-drop interactions, keyboard navigation, and PDF export.
- Led full-stack development of an inventory-forecasting platform using React, TypeScript, GraphQL, and Snowflake; the platform reduced inventory waste by $30M annually.
- Consolidated sample tracking, status management, exports, and reporting into one application for 16 stakeholders, saving approximately 800 hours annually.

Charla.cc — Co-Founder & Software Engineer

Jul 2021–May 2022

- Co-founded and built a social analytics platform with unified customer profiles; contributed to Go/DGraph ingestion pipelines and owned Docker-based infrastructure and AWS CI/CD.

TECHNICAL SKILLS

Frontend: TypeScript, React, React Native, Next.js, Legend State, Three.js, Vite, Tailwind CSS
Testing & delivery: Playwright, React Doctor, GitHub Actions, Jenkins, Docker
APIs & data: Node.js, Express, GraphQL, WebSockets, SQL, PostgreSQL, Snowflake, Redis, AWS

EDUCATION

Hack Reactor — Advanced Software Engineering Immersive, 2021
American River College — A.S. Computer Science, 2020
